

Accudata Systems is an IT consulting and integration firm with more than two decades of experience providing high value IT services and integrated solutions focused on enterprise network and security infrastructure.

At Accudata Systems, we structure every engagement to address the unique strategic, tactical, and operational needs of each client. Our value driven philosophy requires that we continuously examine our services and technology offerings to ensure that we are effectively assisting our clients in creating a computing environment that maximizes their investment in Information Technology.

A History of Client Satisfaction

Accudata Systems was formed with one principal goal in mind: do everything possible to meet or exceed our clients' needs and expectations. This steadfast commitment to customer satisfaction has resulted in many long term client relationships that extend back to the founding of our company. In addition . . .

- Seven of the top ten largest Texas companies are clients.
- We work extensively with middle market and emerging companies that leverage our expertise, experience and resources.
- We work in a broad array of industries including energy, manufacturing, telecommunications, health care, engineering and construction, government, as well as financial, legal, and other professional services.
- Strong relationships with premier industry partners enhance our service and support capabilities.
- Our regional geographic focus ensures the necessary level and quality of resources to effectively support our clients.
- In the highly volatile IT industry, Accudata Systems has experienced more than 20 years of steady growth and financial stability.

IT Innovation Drives Business Productivity

Since the introduction of personal computing and throughout the evolution of PC-based networking, Accudata Systems has experienced first hand the significant gains in productivity that low cost computing has brought to all types of organizations.

The pace of innovation is not slowing. IT is becoming a more essential element of every aspect of your business, and the Internet is blurring the lines between internal and external networks. Therefore, it is critical for you to examine newly introduced technologies not only for their added value but also for their overall impact on performance, reliability and security.

Accudata Systems has the depth of experience to assist you in introducing new technologies with minimal disruption to your current environment. Our core competencies in networking and enterprise security create the ideal foundation for our specialized expertise in the following areas:

Enterprise Security

- Network & Perimeter Security
- Intrusion & Outbreak Prevention
- Secured Communications
- Spam & Content Filtering
- Wireless Enablement & Security
- Event Awareness & Log Correlation

Networking

- IP Communications
- Voice & Data Convergence
- IP Telephony
- Microsoft Enterprise Solutions
- E-mail Management
- Operations Management
- Workforce Mobility
- Data Protection

Accudata Systems' Information Technology Improvement Process — Keep It Simple!

Every successful IT initiative involves effectively combining people, processes, and technology. When you engage Accudata Systems, we partner with you to architect a solution to meet the needs of your organization. Whether you need strategic consulting to help you examine technology alternatives, tactical assistance to deploy a new technology, or operational services to help support your network, we are ready to engage and execute at any point, at any level.

Accudata Systems' Information Technology Improvement Process (ITIP) is a simple yet comprehensive framework that guides our thoughts and actions. It's based on a combination of non-proprietary, world class best practices and our own consulting methodologies. We don't lock you into one proprietary consulting methodology. We incorporate the best methodologies in the world, driving more value into the services and solutions that we provide.

ITIP Step 1 – Consult: Where do you want to go and why?

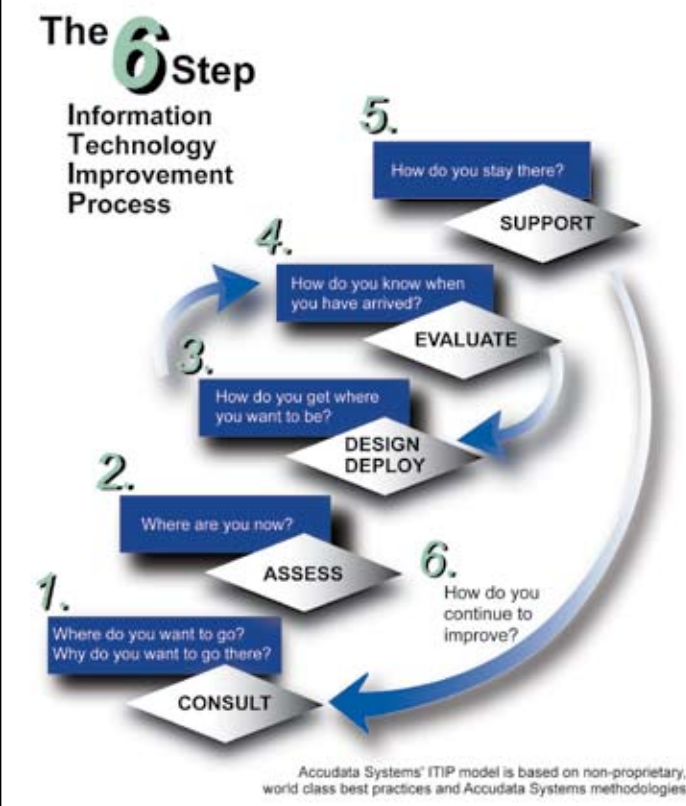

When we begin an engagement, our first step is to determine where you want to go and why you are moving in that direction. We want to get a clear idea of your goals and the path you're planning on taking to achieve those goals. During this step, we discuss technology alternatives, outline costs and benefits, and examine the organizational impact of change.

- Is this a strategic, tactical or operational issue?
- Is this a people, process or technology problem?
- What are the technology alternatives?
- What are the costs and risks associated with each alternative?
- What are the business benefits of this new initiative?

ITIP Step 2 – Assess: Where are you now?

Once you have determined where you want to go, the next step is to assess your current environment. Accudata Systems has developed a set of assessment tools that helps us perform comprehensive gap analyses and quantify deficiencies and resolutions according to a range of factors, such as risk, cost, impact, time and complexity. Our consultants perform assessments in all areas of IT infrastructure, including:

- Security Vulnerabilities
- Penetration Testing
- Wireless & Dial-Up Security
- IP Telephony Readiness
- Data Protection
- Microsoft Active Directory
- Messaging Infrastructure
- Network Infrastructure
- Patch Management
- Data Classification

ITIP Step 3 – Design & Deploy: How do you get there?

Based on your goals and your current environment, Accudata Systems works with you to design and implement the technology solution that will maximize your IT investment. Our integration capabilities include:

- Best-in-Class Integrated Solutions
- Full Life Cycle Project Planning, Implementation & Management
- Infrastructure Upgrades & Platform Migrations
- Rapid Technology Deployment
- Technology Procurement

ITIP Step 4 – Evaluate: How do you know when you've arrived?

Due to the complex, multi-vendor nature of today's IT environment, project management is an essential element of every initiative. Throughout the Design & Deploy stage, we constantly monitor the project to ensure we are on time with all milestones and that we meet or exceed your expectations prior to project completion. Beyond our technical expertise, our clients value our steadfast commitment to seeing issues through to resolution!

ITIP Step 5 – Support: How do you stay there?

Many IT initiatives fall short of expectations because the mechanisms needed to maintain and support them have not been put in place. Accudata Systems provides a complete set of support services to ensure the smooth and efficient operation of your IT environment, including:

- Incident Management
- Network Support Agreements
- 24/7 Emergency Response & Support
- License & Subscription Management
- Ongoing Security & Network Health Checks

Strong Technology Alliances Complete the Circle!

Advice without results? Not any more! Today's business executives want complete solutions with full accountability throughout the entire project life cycle. Accudata Systems partners with the world's leading and emerging technology companies to provide best-in-class integrated solutions and ongoing multi-layered technical support.

At Accudata Systems, we know the challenges involved in properly supporting today's security and network infrastructures. We offer the ideal solution by combining the best of our support capabilities with the strengths of our industry partners. The result is a comprehensive support package that is unmatched in the industry.
